EDUCATION

Diploma, Computer Information Technology (CIT)

British Columbia Institute of Technology, Dec 2020

- Two-year full-time program specializing in front-end and back-end development with networking and hardware functionalities
- Learned how to work on projects as a group with a sponsor (professional environment)
    - o IT Projects Practicum (ISSP)
    - o Agile Development

PROJECTS

Stock Exchange Application (Front-End Developer)

Stock exchange application for stock market enthusiasts and data hunters

- Worked in a group of six people on a 5-week project to create a mock stock exchange application for beginners
- Uses JavaScript for the UX/UI design, IEX Stock Trading API to get the stock data and MongoDB to store data and information
- Users can register and login with their information and can buy, sell, and check prices of stocks ($50000 is given upon registration)
- Consists of a news feed, graph page, admin table, portfolio page, currency converter, and more…

Forensic Guardians (Front-End & Back-End Developer)

Created an interactive database which holds pictures and Information regarding identifying marks on bodies for the purpose of identifying bodies

- Worked in a group of five people on a term-long project to deliver an application for our client Forensic Guardians
- Uses React Native, Node, Express for the UX/UI design and MSSQL to store data and information
- Users can register and input pictures and information regarding identifying marks on bodies for the purpose of identifying bodies
- Admins can search the database for the specific person for the purpose of identifying bodies
- Consists of body mapping, admin panel, notification system, two factor authentications, and more…

TedxAbbotsford/Dans l'jardin (Front-End & Back-End Developer)

Created an 'ethical uber' for musicians which helps link professional musical players and private clients via a live booking tool

- Worked in a group of six people on a term-long project to deliver an application for our client TedxAbbotsford
- Created a wireframe design in Figma for an application that is responsive on both mobile and desktop environment
- Uses the MERN stack for the web application to display the pages and store data and information
- Musicians will apply by entering information and data and admin will approve of the application
- Users can schedule a booking through the website and admin will assign a musician to a user
